# Candidacy for Second Vice- President of CIML

---

Bill Loizides

General Manager, Legal Metrology Australia

October 2023

Measurement for a fair, safe, healthy and competitive Australia | [measurement.gov.au](https://www.measurement.gov.au)

# National Measurement Institute

---

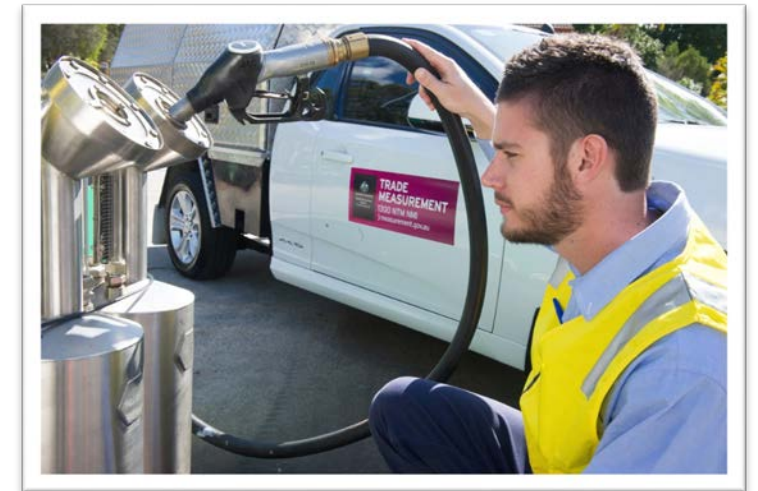

# Who am I?

- General Manager, Legal Metrology, NMIA.
- One of only a few national metrology authorities with a 'line of sight' from the primary standards and the development of OIML Recommendations to their implementation and enforcement within the community affecting Manufacturers, Traders and public.
- Responsible for all legal metrology operations in Australia.
- Experience in legal metrology, strategic policy development at the Economy level, enforcement and compliance, health and safety, communications and change management.

My Team - 2023

A Trade Measurement Inspector testing a fuel dispenser

# OIML Contributions

- CIML Member for Australia since 2016
- Presidential Council Member from 2017
- Deputy Chair, OIML-CS Management Committee
- Chair of the Maintenance Group OIML-CS
- CEEMS Advisory Group Member
- Digital Task Group Member
- Direct and coordinate Australia's participation within OIML (TC Committee participation).

# Support for the President and OIML

- If elected I look forward to supporting the vision and work of the new CIML President, 1<sup>st</sup> Vice-President, Presidential Council, CIML, BIML and of course the OIML members.
- OIML must become innovative, dynamic and responsive to stakeholder needs and emerging issues.
- Legal metrology must leverage the 4<sup>th</sup> industrial revolution, not simply keep up.
- There will be increased opportunities for regional and international cooperation at an operational level. We must explore OIML's role in this space!
- I look forward to building closer collaborations with BIPM, ISO, IEC, ILAC, IAF and other quality infrastructure partners.

# The Way Forward

## The OIML 4 pillars

- I remain a strong advocate for **CEEMS** and support its activities and continue to explore new and innovative ways of building expertise and capacity across OIML and in particular the RLMOs.
- Reducing barriers to trade and costs to instrument manufacturers, users *and* national authorities by continually looking to support and drive the evolution of the **OIML-CS** and in the future incorporate a robust and meaningful CTT process at a regional and/or international level.
- Ensure the **digital transformation** work of the OIML is not only looking internally to our work but establishing a uniform understanding of definitions, architecture and application externally to those that build the system but also regulate them.
- **Recommendations**

# Thank you for your support
